

# Tonga's infrastructure planning process – evolution, lessons learned and next steps

Presented by: Ma'u Leha  
Deputy Secretary-National Planning Office

Prime Minister's Office, Government of Tonga

Pacific Region Infrastructure Facility

Government of Tonga

# Role & History of NIIP Process in Tonga

- **Prioritizing large infrastructure projects helps:**

- a) make better use of limited time and resources
- b) focus on areas of greater need

- **Seek to apply objective and reliable criteria**

- **Tonga had NIIPs in 2010 (1st in Pacific), 2013 (10 years) and 2015 (review)**

- **Tonga had NIIPs in 2010 (1st in Pacific), 2013 (10 years) and 2015 (review)**

- **Government observed the need for government driven and to strengthen M&E processes**

# Lessons and solutions from the review of NIIP in Tonga

## ➤ Lesson 1: Sectors covered by NIIP in Tonga:

- *national infrastructure plans needs to move beyond the initial limited focus on Transport and Utilities Infrastructure*
- *providing a comprehensive coverage of all large infrastructure that is managed through the government budget*

## ➤ Lesson 2: Positioning the NIIP in the Tongan planning system:

- *NIIP 3 now covers about 29 sectors squarely placed in its position as a cross-cutting plan for hard infrastructure.*
- *the NIIP has the role to build understanding of improved infrastructure planning and management into sector plans. It does not 'own' the sector projects*

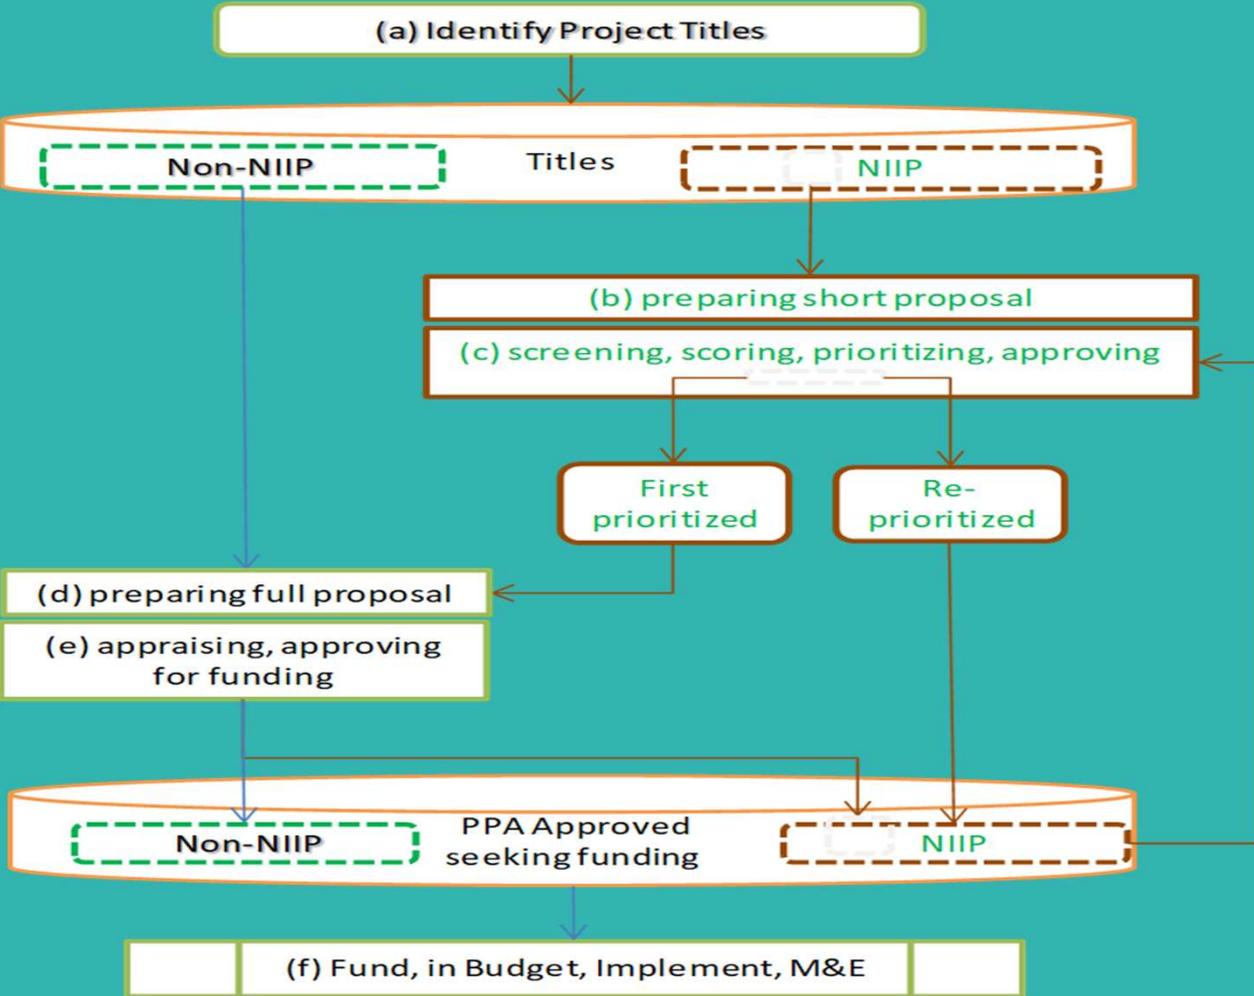

## ➤ Lesson 3: Identifying NIIP projects in the Tongan planning system

## ➤ Lesson 4: Positioning NIIP prioritization in the Tongan project cycle:

- *project cycle covers the whole process from identification, to formulation, appraisal, approval, funding and implementation with appropriate M&E at each stage*
- *All projects in Tonga are required to go through this cycle. A simple version of the project cycle in Tonga, with prioritization, is shown in Figure 2 2*

# The Tongan Project Cycle-with NIIP Prioritization Mainstreamed

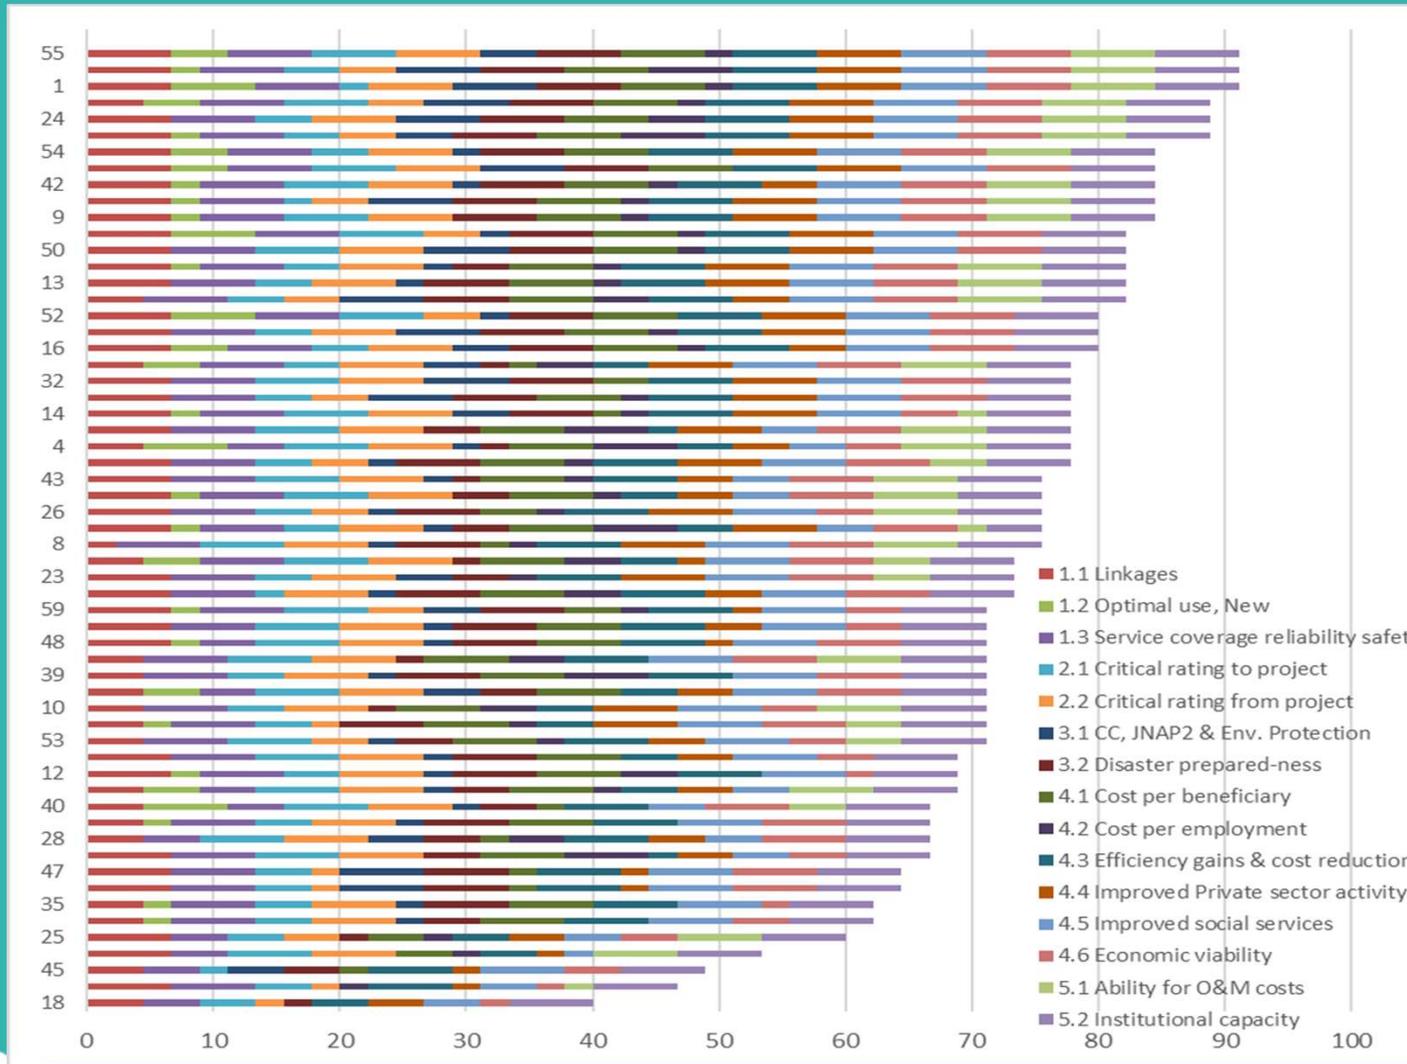

# Lessons Learned continued....

- **Lesson 5: MCA prioritization methodology for Tonga:** Project screening using the Project Proposal Application to ensure:
  - *that they meet minimum standards: consistent with Government policy (TSDF and other plans); are adequately completed; have consulted with other key planning and related regulators; face no risks significant enough to cancel the project; and contain a completed MCA.*
  - *Submissions not passing any of these screening steps are returned to the MDA/PE for reconsideration. Those passing are then subject to NPD for scoring and ranking via the MCA*
  
- **Lesson 6: From “MCA-priority list” to “Government-priority list”**
  - *MCA-priority list is submitted (with any notes) by NPD to the NIIP-TWC/TC for cross government consultation and consideration.*
  - *MCA-priority list to become the Government-priority list for endorsement by PAD-CC to Cabinet, with the reasoning for any adjustments between the two.*

## For example: MCA project list ranking by criteria scores and project number

# Lessons Learned continued....

- **Lesson 7: Content of the NIIP in the Tongan planning system:**
  - *review overall progress with infrastructure development and key cross-sector issues*
  - *review the policy framework supporting infrastructure and emphasizing the importance of linking to other key cross cutting plans,*
  - *highlighting and supporting the role of infrastructure related planning and management tools, e.g. standard infrastructure service KPIs, asset registers, maintenance schedules etc. to help inform sector planning*
  - *compilation of all NIIP projects from all existing planning and policy documents and decisions*
- **Lesson 8: building NIIP M&E into planning and project M&E process**

# Enhancements made and tested

- Active staff participation and leadership
- NIIP projects = hard infrastructure, TOP\$1m & above
- Prioritization mainstreamed early in project cycle, before full funding proposal to PAD-CC for funding approval

- Project Proposal Application (PPA) modified, with MCA, link to resilience\CC, risk\hazards, spatial planning etc – consistent with TSDF

# Roadmap for taking infrastructure planning forward

- Establish a sub-working group of NIPP-TWC
- Key follow up actions:
  - a. in consultation with PSC, ensure staff responsible for projects and planning have this clearly set out in the JDs, and are required to participate in regular training related to these skills
  - b. ensure other relevant guidance is updated to capture this modified project cycle and the enhanced documentation – for example how the CPs and Ars can support the NIIP process
  - c. MDAs use the Government NIIP priority list to guide PPA preparation for funding, and MoF use the list to seek funding
  - d. NIIP report share with Development Partners and invite them to use it in their development programming with Tonga
- Next MCA-prioritization
